# ANNALI IDROLOGICI

## ANNO 1933

### PARTE I - OSSERVAZIONI

ROMA
ISTITUTO POLIGRAFICO DELLO STATO
LIBRERIA
1934 - ANNO XII

# PREFAZIONE

Il presente volume contiene gli elementi di osservazione raccolti nell'anno 1933 dalla Sezione di Parma dell'Ufficio Idrografico del Po e riferentisi al corso principale del fiume ed agli affluenti del versante appenninico dalla Scrivia al mare.

Altri due separati volumi raccolgono gli analoghi elementi distintamente per il versante alpino a sinistra della Sesia (Sezione Distaccata di Milano) e per quello alpino ed appenninico a monte dello sbocco della Scrivia (Sezione Distaccata di Torino).

Di norma, ogni elaborazione degli elementi raccolti è esclusa dal presente volume e verrà compresa invece nel corrispondente volume della Parte II$^a$ degli Annali. Si sono solamente indicate alcune prime e più elementari elaborazioni (medie, scostamenti dalla normale, ecc.) che servono a rendere possibile la immediata utilizzazione dei dati raccolti anche prima che venga pubblicata la Parte II$^a$ che necessità di studio costringono a ritardare.

Nessuna variazione presenta il volume rispetto a quelli precedenti, essendosi raggiunta la voluta omogeneità e distribuzione della materia in relazione ai volumi della Parte II$^a$ contenenti le elaborazioni e studi.

*PARMA, marzo 1934 - XII*

L'Ingegnere Capo del Genio Civile
Direttore dell'Ufficio Idrografico del Po

## SEGNI CONVENZIONALI.

» Dato mancante.

[ ] Dato interpolato.

? Dato incerto.

P - Pluviometro comune.

Pn - Pluvionivometro.

Pr - Pluviografo.

Pt - Pluviometro totalizzatore.

## ANNOTAZIONI.

Le temperature medie sono calcolate con la formola: $\frac{t^8 + t^{max} + t^{min} + t^{21}}{4}$

e sono stampati rispettivamente in grassetto e in corsivo il valore massimo e minimo della temperatura media giornaliera nel mese.

La velocità del vento è indicata in gradi secondo la scala:

| | | | | |
|---|---|---|---|---|
| 0 - Calma | - Velocità oraria . . . . . | Km. | 0-7 |
| 1 - Debole | - » » . . . . . | » | 7-14 |
| 2 - Moderato | - » » . . . . . | » | 14-29 |
| 3 - Quasi forte | - » » . . . . . | » | 29-36 |
| 4 - Forte | - » » . . . . . | » | 36-50 |
| 5 - Tempesta | - » » . . . . . | » | 50-83 |
| 6 - Uragano | - » » . . . . . | » | 83-108 |

Le osservazioni pluviometriche, espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono sempre pioggia e neve fusa. Le quantità di pioggia segnate in grassetto sono le massime giornaliere. I dati dei pluviometri totalizzatori sono aumentati del 5 %. Le precipitazioni nevose sono indicate anche come altezza di strato sul suolo nelle apposite tabelle poste al termine della parte meteorologica.

Sono indicati come giorni piovosi quelli nei quali la precipitazione è stata uguale o superiore ad un millimetro.

** Valore massimo.
* Valore minimo.

## ANNOTAZIONI.

I valori di piena e di magra ordinaria sono calcolati, per ciascuna serie idrometrica, dalla data di inizio delle osservazioni a tutto l'anno 1930, basandosi sul criterio di frequenza, ed ammettendo come ordinarietà dell'evento la frequenza del 75 per cento. I valori stessi sono aggiornati al termine di ogni quinquennio.

Le osservazioni idrometriche e quelle di torbida e temperatura delle acque sono effettuate alle ore 12 o ricavate per quell'ora dai diagrammi degli idrometrografi.

Le altezze idrometriche interpolate in carattere minuto fra quelle giornaliere rappresentano le altezze di colmo verificatesi da un mezzogiorno all'altro.

Le portate medie giornaliere per le stazioni del Po e per quelle degli affluenti, senza idrometro registratore, corrispondono alle altezze idrometriche meridiane. Per le stazioni degli affluenti con registratore le portate indicate rappresentano la media dei relativi valori assunti durante la giornata.

Per la misura della torbida si usa generalmente la bottiglia Giandotti (litri 2) prelevando ogni giorno alle ore 12 un campione negli affluenti e tre campioni nel Po. Il valore della torbidità specifica in ogni stazione viene ricavato per il Po a seguito di filtrazione in luogo e successivo peso dei campioni giornalieri nel laboratorio d'Ufficio, ed è espresso in unità di peso; per gli affluenti, il valore stesso viene ricavato a seguito di decantazione in luogo, ed è espresso in unità di volume.

Le temperature diurne dell'aria sono date come media delle temperature massima e minima del giorno.

Le medie di riferimento indicate come aventi per origine l'anno 1901 sono tali per le osservazioni idrometriche iniziate in quell'anno o anteriormente: in tutti gli altri casi si riferiscono al periodo che ha origine con l'anno indicato nella testata per l'inizio delle osservazioni.

L'Ufficio (Sezione di Parma) raccoglie e conserva anche i dati inerenti agli idrometri di cui all'elenco riportato nella pagina seguente:

| N. d'ordine | Denominazione dell'idrometro | Giurisdizione idraulica | Anno dal quale si conservano i dati | Natura delle osservazioni |

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) Massima magra assoluta -1.67 (Maggio 1817). — (..) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (-- )L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) L'Idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (--) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (** ) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
--- Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (..) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
(---) Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

(*) Massima magra assoluta -1.02 (22 Aprile 1854). — (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
*** Massima magra assoluta -1.67 (Maggio 1817).

# OSSERVAZIONI E RILIEVI NEL DELTA PADANO

COROGRAFIA
DEL DELTA PADANO

▼ Stazione idrometrica

▬ „ di misura di portata

● Osservatorio

**IDROMETRIA.** — Gli elementi di osservazione sono dedotti dai diagrammi degli idrometrografi col criterio di indicare i vertici di alta e bassa marea quando questa si manifesta in modo sensibile, e negli altri casi i punti caratteristici del diagramma.

Le altezze sono riferite per ogni stazione allo zero idrometrico, la cui quota sul livello medio del mare è indicata sotto il nome della stazione.

I tempi sono segnati per ore intiere e mezz'ore.

## Altezze idrometriche giornaliere

| Rami del delta | Stazioni e quote dello zero sul medio mare | 1 | | 2 | | 3 | | 4 | | 5 | | 6 | | 7 | | 8 | | 9 | | 10 | | 11 | | 12 | | 13 | | 14 | | 15 | | 16 | |

*N. B.* - La mancanza di dati nel periodo dal 20 al 27, è dovuta ad interruzione del funzionamento degli idrometrografi per causa del gelo.

# *c)* FREATIMETRIA

## SEGNI CONVENZIONALI.

» Mancano le osservazioni.

[ ] Dato interpolato.

? Dato incerto.

## ANNOTAZIONI.

Le osservazioni ai pozzi vengono eseguite nove volte al mese nei giorni 2, 5, 8, 12, 15, 18, 22, 25, 28 ed al mattino prima che vengano effettuati forti attingimenti d' acqua.

I valori delle altezze del livello freatico riportati nelle Tabelle che seguono sono riferiti al livello medio del mare.
