Sono stampati in grassetto ed in *corsivo* rispettivamente i massimi ed i minimi

## CONTENUTO DELLE TABELLE

I dati sono trasmessi da stazioni termopluviometriche e da Osservatori dipendenti direttamente o controllati dall'Ufficio.

Ogni stazione è fornita di un termometro a massima e di un termometro a minima, oppure di un termometro a massima e minima uniti, che vengono osservati ogni giorno alle ore 9 antimeridiane.

Il valore massimo rilevato viene assegnato al giorno precedente; quello minimo al giorno stesso dell'osservazione.

Le stazioni sono ordinate nella tabella secondo la rispettiva posizione idrografica.

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno.

**TABELLA I.** — Sono riportati, per le stazioni che hanno regolarmente funzionato nell'anno, i valori massimi e minimi rilevati giornalmente, e le rispetti-

ve medie mensili, unitamente alla temperatura media del mese, dell'anno cui si riferiscono le osservazioni e del precedente periodo d'osservazione.

**TABELLA II.** — Per tutte le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come « temperatura diurna » è assunto il valore della semisomma delle temperature massima e minima osservate in uno stesso giorno.

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno ed il giorno nel quale sono state osservate.

Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

## CONSISTENZA DELLA RETE TERMOMETRICA AL 31 DICEMBRE 1952

| ZONA DI ALTITUDINE<br><i>m</i> | T <sub>m</sub> | T <sub>r</sub> |
|--------------------------------|----------------|----------------|
| 0 — 200                        | 47             | 8              |
| 201 — 500                      | 80             | 6              |
| 501 — 1000                     | 74             | 5              |
| 1001 — 1500                    | 40             | 2              |

### TERMINOLOGIA

1. — Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa eventualmente, la neve sciolta) per l'area della superficie orizzontale dell'imbuto raccoglitore.

2. — Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.

3. — Intensità media di precipitazione, in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

## CONTENUTO DELLE TABELLE

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni di osservazione che hanno funzionato nell'anno.

I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

**TABELLA I.** — Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed i totali mensili ed annuo della precipitazione e del numero dei giorni piovosi.

Per le stazioni dotate di apparecchiatura a lettura diretta (pluviometri comuni e pluviometri) le osservazioni vengono eseguite ogni giorno generalmente alle ore 9 ed il risultato viene attribuito al giorno stesso della misura; il valore segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura. (1)

Per le stazioni dotate di pluviografo, si riporta, per ogni giorno, la quantità di pioggia che dal diagramma risulta caduta nelle 24 ore comprese fra le ore 9 del giorno precedente e le ore 9 del giorno di cui si tratta.

Con il carattere *grassetto* è stampato il massimo quantitativo giornaliero misurato per ogni mese.

**TABELLA II.** — Per le stesse stazioni di cui alla tabella I, riporta i totali mensili ed annui delle quantità di precipitazione.

Per ciascuna stazione è riportato in *grassetto* il più elevato dei valori mensili ed in *corsivo* il più basso.

**TABELLA III.** — Per le stazioni dotate di pluviografo, riporta i dati relativi ai valori più elevati delle precipitazioni

registrati, nell'anno, per 1, 3, 6, 12, e 24 ore consecutive appartenenti o no allo stesso giorno.

Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle, eventualmente terminate dopo le ore 24 del 31 dicembre.

**TABELLA IV.** — Per tutte le stazioni che hanno regolarmente funzionato nell'anno, riporta i massimi valori delle precipitazioni verificatesi per 1, 2, 3, 4, e 5 giorni consecutivi, appartenenti o no allo stesso mese. Sono considerati solamente i periodi il cui inizio cade entro l'anno anche se eventualmente siano terminati nell'anno successivo.

Per le durate da 2 a 5 giorni le altezze possono essere talvolta uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata. E ciò per evitare che il massimo di 2 giorni possa risultare inferiore a quello di 1 giorno e così via.

**TABELLA V.** — Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata registrate dai pluviografi.

**TABELLA VI.** — Riporta, per alcune determinate stazioni, per i mesi da gennaio a maggio e da ottobre a dicembre nei quali possono verificarsi precipitazioni nevose:

a) le altezze, in centimetri, degli strati nevosi sul suolo presenti nell'ultimo giorno delle tre decadi mensili,

b) il numero dei giorni nei quali si sono avute precipitazioni nevose,

c) il numero complessivo dei giorni di permanenza della neve sul suolo.

### CONSISTENZA DELLA RETE PLUVIOMETRICA AL 31 DICEMBRE 1952

| ZONA DI ALTITUDINE<br><i>m</i> | P          | Pr         | Pn         | Pt        |

| <b>Totali</b>                  | <b>296</b> | <b>253</b> | <b>252</b> | <b>10</b> |

N. B. - Nella tabella della consistenza della rete sono incluse tutte le stazioni che hanno funzionato durante l'anno, di alcune delle quali per troppo breve periodo di osservazione o per irregolarità riscontrate, non sono stati riportati i nomi in alcune delle tabelle che seguono.

(1) Fanno eccezione i dati ricavati dagli Annali del Servizio Meteorologico Centrale della Svizzera, relativi alle stazioni ricadenti nel territorio di tale Stato, contrassegnate con l'asterisco, per le quali le precipitazioni segnate in un dato giorno corrispondono a quelle cadute tra le ore 9 del giorno di cui si tratta e le ore 9 del giorno seguente.
