Tabella II – Totali annui e riassunto dei totali mensili delle quantità di precipitazione . . . . . » 204
Tabella III – Precipitazioni di massima intensità registrate ai pluviografi . . . . . » 220
Tabella IV – Massime precipitazioni dell'anno per periodi di più giorni consecutivi . . . . . » 229
Tabella V – Precipitazioni di notevole intensità e breve durata registrate ai pluviografi . . . . . » 243
Tabella VI – Manto nevoso . . . . . » 252

Elenco alfabetico delle stazioni termopluviometriche . . . . . » 265

Sezione A - TERMOMETRIA

Abbreviazioni e segni convenzionali

Termometro a massima e minima	Tm
Termometro registratore	Tr
Dato incerto	?
Dato mancante	»
Dato interpolato	[ ]
Stazione del Decennio Idrologico Internazionale	♦
Stazione del Servizio Meteorologico Svizzero	*

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i massimi ed i minimi.

CONTENUTO DELLE TABELLE

Il bacino del Po è suddiviso nei Compartimenti Idrografici di competenza delle Sezioni di: MILANO (bacini dal Sarca-Mincio all'Agogna compreso); TORINO (bacini dal Sesia al Tanaro compreso); PARMA (bacini dallo Scrivia al Panaro compreso e dal Delta Padano).

I dati sono trasmessi da stazioni termopluviometriche e da Osservatori dipendenti direttamente o controllati dall'Ufficio.

Ogni stazione è fornita di un termometro a massima e di un termometro a minima, oppure di un termometro a massima e minima riuniti, che vengono osservati ogni giorno alle ore 9 antimeridiane; alcune stazioni sono dotate anche di un termometro registratore.

Il valore massimo rilevato viene assegnato al giorno precedente, e quello minimo al giorno stesso dell'osservazione.

Le stazioni sono ordinate nelle tabelle secondo i bacini affluenti al Po, susseguentesi nel senso antiorario dal Mincio al Panaro; in ciascun bacino le stazioni si succedono secondo l'ordine di sbocco da monte a valle degli affluenti e subaffluenti.

Le tabelle sono precedute dall' "Elenco e caratteristiche delle stazioni termometriche" che hanno funzionato nell'anno. Sono stampate in *corsivo* le stazioni di cui non si pubblicano le osservazioni. I nomi racchiusi fra parentesi, che compaiono nell'elenco, si riferiscono ai sottobacini.

TABELLA I. – Sono riportati, per alcune stazioni, opportunamente scelte per la loro rappresentatività, i valori massimi e minimi rilevati giornalmente, e le rispettive medie mensili, unitamente alla temperatura media del mese dell'anno cui si riferiscono le osservazioni e del precedente periodo d'osservazione.

TABELLA II. – Per tutte le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come "temperatura diurna" è assunto il valore della semisomma delle temperature massima e minima osservate in uno stesso giorno;

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno ed il giorno nel quale sono state osservate.

Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

Gocce	goc
Fiocchi (precipitazione nevosa non misurabile)	fioc
Stazione del Decennio Idrologico Internazionale	♦
Stazione del Servizio Meteorologico Svizzero	*

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i massimi ed i minimi.

TERMINOLOGIA

1. — Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa eventualmente la neve fusa) per l'area della superficie orizzontale dell'imbuto raccoglitore.

2. — Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.

3. — Intensità media di precipitazione, in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

CONTENUTO DELLE TABELLE

Il bacino del Po è suddiviso nei Compartimenti Idrografici di competenza delle Sezioni di: MILANO (bacini dal Sarca-Mincio all'Agogna compreso); TORINO (bacini dal Sesia al Tanaro compreso); PARMA (bacini dallo Scrivia al Panaro compreso e dal Delta Padano).

Le stazioni pluviometriche sono ordinate nelle tabelle secondo i bacini affluenti al Po susseguentesi nel senso antiorario dal Mincio al Panaro; in ciascun bacino le stazioni si succedono secondo l'ordine di sbocco da monte a valle degli affluenti e subaffluenti.

Le tabelle sono precedute dall'Elenco e caratteristiche delle stazioni pluviometriche che hanno funzionato nell'anno. Sono stampate in *corsivo* le stazioni di cui non si pubblicano le osservazioni. I nomi racchiusi fra parentesi, che compaiono nell'elenco si riferiscono ai sottobacini.

I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I. — Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed i totali mensili ed annuo della precipitazione e del numero dei giorni piovosi.

Per le stazioni dotate di apparecchiatura a lettura diretta (pluviometri comuni e pluvionivometri) le osservazioni vengono eseguite ogni giorno generalmente alle ore 9 ed il risultato viene attribuito al giorno stesso della misura; il valore segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura. Fanno eccezione i dati ricavati dagli Annali del Servizio Meteorologico Centrale della Svizzera, relativi alle stazioni ricadenti nel territorio di tale Stato, contrassegnate con l'asterisco, per le quali le precipitazioni segnate in un dato giorno corrispondono a quelle cadute tra le ore 9 del giorno in cui si tratta e le ore 9 del giorno seguente.

Per le stazioni dotate di pluviografo, si riporta, per ogni giorno, la quantità di pioggia ché dal diagramma risulta caduta nelle 24 ore comprese fra le ore 9 del giorno precedente e le ore 9 del giorno di cui si tratta.

TABELLA I bis. — Riporta, per le stazioni pluviometriche totalizzatrici, i totali di altezza di precipitazione relativi ad intervalli di tempo, di norma non coincidenti con l'ultimo giorno di ogni mese, rilevabili dalla lettura delle date delle osservazioni.

TABELLA II. — Per ogni stazione riporta i totali mensili, ed annuo delle quantità di precipitazione.

TABELLA III. — Per le stazioni dotate di pluviografo, riporta i dati relativi ai valori più elevati delle precipitazioni registrati, nell'anno, per 1, 3, 6, 12 e 24 ore consecutive appartenenti o no allo stesso giorno.

Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle, eventualmente terminate dopo le ore 24 del 31 dicembre.

TABELLA IV. — Per tutte le stazioni, che hanno regolarmente funzionato nell'anno, riporta i massimi valori delle precipitazioni verificatesi per 1, 2, 3, 4 e 5 giorni consecutivi, appartenenti o no allo stesso mese. Sono considerati solamente i periodi il cui inizio cade entro l'anno anche se eventualmente siano terminati nell'anno successivo.

Per le durate da 2 a 5 giorni le altezze possono essere talvolta uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata. E ciò per evitare che il massimo di 2 giorni possa risultare inferiore a quello di 1 giorno e così via.

TABELLA V. — Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata registrate dai pluviografi.

TABELLA VI. — Riporta, per alcune determinate stazioni, per i mesi da gennaio a maggio e da ottobre a dicembre nei quali possono verificarsi precipitazioni nevose:

a) le altezze, in centimetri, degli strati nevosi sul suolo presenti nell'ultimo giorno delle tre decadi mensili;

b) il numero dei giorni nei quali si sono avute precipitazioni nevose;

c) il numero complessivo dei giorni di permanenza della neve sul suolo.
