# METEOROLOGIA

Nel presente capitolo sono riportati per gli Osservatori Meteorologici di TRIESTE, S. NICOLÒ DI LIDO (Venezia), PADOVA e SADOCCA (idrovora) i valori della pressione atmosferica, dell'umidità relativa, della nebulosità e del vento. I valori della temperatura e delle precipitazioni sono stati riportati nelle rispettive Sezioni A e B.

## CONTENUTO DELLE TABELLE

**TABELLA I.** — Riporta i valori medi giornalieri, mensili ed annui della *pressione atmosferica* espressa in *mm* di mercurio, a zero gradi e non ridotta al mare.

**TABELLA II.** — Riporta i valori medi giornalieri, mensili ed annui della *umidità relativa*. Il valore dell'umidità relativa (espresso in centesimi) è quello del rapporto fra la tensione del vapore acqueo misurato e la tensione massima corrispondente alla temperatura rilevata durante l'osservazione.

**TABELLA III.** — Riporta i valori medi giornalieri, mensili ed annui della *nebulosità* espressa in decimi di cielo coperto.

**TABELLA IV.** — Riporta i valori medi giornalieri, mensili ed annui della *velocità del vento*, espressi in *km/ora* e contiene, inoltre, la direzione del vento prevalente durante il giorno e la durata in ore durante il quale esso ha soffiato, nonché la velocità media oraria massima e la sua direzione.

I valori medi giornalieri della pressione e dell'umidità sono calcolati in base a valori biorari; quelli della velocità del vento in base a valori orari, mentre quelli della nebulosità corrispondono alla media aritmetica delle osservazioni alle ore 7, 14 e 19.

Per tutti gli elementi meteorologici riportati in questo capitolo, viene adottato il giorno civile, dalle ore 0 alle 24.
